- Worked with **BRAUNI PETROL CHEMICAL & OIL REFINERY, BRAUNI** as an **INSTRUMENT FITTER "** since 09.04. 2003 to 25.03. 2006.

- Worked with **USHA MARTIN LTD. JAMSHEDPUR** as an "**INSTRUMENT FITTER "** since 15.10.2001 to 14.02.2003.

DUTIES & RESPONBILITIES

In the construction industry, an instrument fitter is synonymous with a pipe fitter. A pipe fitter installs and repairs pipe systems used to house the electrical and heating and cooling structures within buildings. Instrument fitters also install the controls (e.g., thermostats) that regulate these utilities.

Reading Blueprints

- Prior to beginning a project, an instrument fitter must thoroughly read and comprehend a blueprint in order to understand how to perform the installation.

Cutting and Bending Pipes

- Using special machinery, instrument fitters cut pipes based on the specifications on a blueprint. They then bend the pipes manually, to fit the layout.

Connecting Pipes

- Using variety methods, such as caulking, gluing and welding, an instrument fitter connects pipes so that they do not easily separate.

Maintaining Tools

- Instrument fitters are responsible for acquiring and maintaining an arsenal of tools, including chisels hammers and wrenches. These tools are necessary to complete every project.

Joining a Union

- If he is covered by a union, an instrument fitter is responsible for meeting all requirements of the respective union (such as the United Association of Plumbers and Pipefitters), paying their dues accordingly.

Instrument fitters primarily assemble equipment and tools, though their day-to-day roles may vary based on their particular skill sets and the type and size of their company. However, after reviewing multiple listings, we've identified several tasks common to most instrument fitter jobs:

Interpret Blueprints and Instructions

Instrument fitters start by reviewing detailed blueprints, drawings, plans, and instructions for the tools and equipment they're going to assemble. They must understand how to read these guides and apply them without error, which requires analyzing and implementing highly technical data.

Assemble Instruments and Tools

With the help of schematics and blueprints, instrument fitters put together precision instruments, tools, and systems ranging from electrical to plumbing.

Select Appropriate Tools and Equipment

Instrument fitters need in-depth knowledge of the various power tools and other equipment used for instrument fitting and assembly so they can choose the correct tools for each job. In addition to hand tools, they may also operate heavy machinery such as forklifts.

Cut Materials

To make tools and systems, instrument fitters must often first lay out, measure, and cut piping and other materials used to make the equipment and instruments they'll assemble. Precision is paramount for this task, so it's often something they spend a great deal of time on.

Test Equipment

After they've assembled the instruments and tools, instrument fitters conduct quality control checks to ensure they're put together correctly and functioning properly.

Perform Maintenance

Instrument fitters regularly inspect all work areas, tools, and equipment, cleaning them after use and repairing machinery as needed. They also set up work areas and position and calibrate equipment.
